1. Fixed error related to Face search module malfunction in the distributed configuration.
2. Fixed error preventing adding a user if a department has not been created.
3. Fixed error preventing displaying the Recognized Faces Monitor on the RWS.
4. Fixed error occurred when Cognitec capture "loses" a face.
5. Fixed memory leak occurred when x64 face recognizer is in use.
6. Issues with face verification on the photo have been fixed.
7. User rights logic towards Face Monitor has been fixed.
8. Fixed error related to incorrect eye position detection when adding a face.
9. Incorrect functioning of the face search module when using Cognitec 8.4 has been fixed.
10. Fixed error related to not showing the color of department in the Recognized Faces Monitor.
11. Fixed error related to incorrect deletion of users in the Face Recognition Module when deleting users in Intellect.
12. Localization bugs have been fixed.
13. A number of minor errors have been fixed. Product stability has been improved.
14. Documentation has been updated.

Important information regarding the new version of Face Intellect

When updating version and using Cognitec face recognition, you must reactivate the license using CognitecLicenseUtil.exe as well as create the *Cognitec Recognition Module* object under the *Face Recognition Server* object in the hardware configuration.
