

Report system v.2.11.0 – RELEASE NOTES

New features, updates and fixes

- Filters for POS events added;
- New layout for the POS detailed report added;
- Ability to hide titles on the video added;
- Ability to export video from the POS detailed report added;
- The problem of filters saving in the POS report fixed;
- A lot of minor bugs are fixed.

Note. POS events filters and POS reports require a support from POS-Intellect. This support will be implemented in the next version of POS-Intellect. In case of need using POS reports before the POS-Intellect release, please update the POS database with the script **transform_to_pos_report.sql** which is available on the downloads page.

To update the POS database follow the directions below:

- Open SQL Server Management Studio utility (Start – All programs - Microsoft SQL Server 2008 R2 - SQL Server Management Studio);
- Connect to the database server;
- Choose POS database in the list;
- In the utility main menu choose «File – Open – File...»;
- Open file «transform_to_pos_report.sql»;
- In the utility main menu choose «Query – Execute» or press F5;
- Close SQL Server Management Studio utility.
